### Functional Diagram

### General Description

The HMC422MS8 & HMC422MS8E are double balanced mixer ICs with integrated LO amplifiers. This mixer can operate as an upconverter or downconverter between 1.2 GHz and 2.6 GHz. With the integrated LO amplifier, the mixer requires an LO drive level of only 0 dBm, and requires only 30mA from a single positive +3V rail. The mixer has 8 dB of conversion loss, an input P<sub>1dB</sub> of +8 dBm and an input third order intercept point of +15 dBm at 2 GHz.

**Pin Descriptions**

Pin Number	Function	Description	Interface Schematic
1	LO	This pin is AC coupled and matched to 50 Ohms.	
2, 3, 6, 7	GND	Pins must connect to RF ground.	
4	Vdd	Power supply for the LO Amplifier. One external RF bypass capacitor (10,000 pF) is required.	
5	IF	This pin is DC coupled. For applications not requiring operation to DC, this port should be DC blocked externally using a series capacitor whose value has been chosen to pass the necessary IF frequency range. For operation to DC, this pin must not source/sink more than 10 mA of current or die non-function and possible die failure will result.	
8	RF	This pin is DC coupled and matched to 50 Ohms.

[2] Circuit Board Material: Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
