Description and Applications

The MASW-000825-12770T is a compact SP2T PIN diode switch in a lead-free 3mm MLP plastic package that offers extraordinary performance with excellent isolation to loss ratio for both T_x and R_x states. The SP2T provides outstanding 20 W C.W. power handling coupled with 64 dBm IIP3 for maximum switch performance.

The MASW-000825-12770T is a 0.05 - 6.0GHz SP2T High Peak and Average Power PIN diode switch used for T/R or LNA Protect Switch applications such as WiMAX and TD-SCDMA.

This device incorporates a PIN diode die fabricated with M/A-COM Technology Solutions patented Silicon-Glass HMICTM process. This chip features two silicon pedestals embedded in a low loss, low dispersion glass. The diodes are formed on the top of each pedestal. The topside is fully encapsulated with silicon nitride and has an additional polymer passivation layer. These polymer protective coatings prevent damage and contamination during handling and assembly.
