# MASW-010350

# SP4T High Isolation Terminated Switch 0.01 - 4.0 GHz

Rev. V1

#### **Features**

- High Isolation: 60 dB @ 2.1 GHz
- Insertion Loss: 0.8 dB @ 2.1 GHz
   Input IP3: 50 dBm Typical @ 2.1 GHz
- Input IP3: 50 dBm Typical @ 2.1 GHz
- Integral CMOS Decoder
- Low Gate Lag for timing sensitive applications
- 5 States: 4 ON paths and All-Off State
- 50 Ω Terminated Outputs (Off-State)
- Lead-Free 4 mm 24-Lead PQFN package
- RoHS\* Compliant and 260°C Reflow Compatible
- Optional 2 Control Operation (no All-Off State)

#### **Description**

The MASW-010350 is an industry leading high isolation single pole four throw (SP4T) switch. This device design is optimized to take advantage of separate GaAs pHEMT switch die and CMOS driver die. The switch circuit design is symmetric and combined with the separate CMOS decoder allows it to maintain an excellent combination of insertion loss and isolation for all states. This makes the device ideal for band switching in multi-channel and multi-mode base-station applications as well as other applications where a compact, high isolation, SP4T switch is required.

The MASW-010350 switch die is fabricated using a mature 0.5 micron gate length GaAs pHEMT process and features full passivation for enhanced performance and reliability.

The MASW-010350 is offered in an industry standard lead-free 4mm 24-Lead PQFN RoHS compliant plastic package, which is ideal for high volume surface mount reflow assembly.

## Ordering Information 1,2

Part Number	Package
MASW-010350-TR3000	3000 piece reel
MASW-010350-001SMB	Sample Test Board

- 1. Reference Application Note M513 for reel size information.
- 2. All sample boards include 5 loose parts.

#### **Functional Schematic**

## Pin Configuration<sup>3,4</sup>

Pin No.	Description	Pin No.	Description	
1	No Connection	13	No Connection	
2	No Connection	14	RF1	
3	No Connection	15	No Connection	
4	No Connection	16	$V_{DD}$	
5	RF4	17	V1 Control	
6	No Connection	18	V2 Control	
7	No Connection	19	V3 Control	
8	RF3	20	Ground	
9	No Connection	21	No Connection	
10	No Connection	22	RFC	
11	RF2	23	No Connection	
12	No Connection	24	No Connection	
		25	Ground (paddle)	

- M/A-COM Technology Solutions recommends connecting all N/C pins to RF and DC ground in the PCB layout.
- The exposed pad centered on the package bottom (P25) MUST be connected to RF and DC ground in the PCB layout.

ADVANCED: Data Sheets contain information regarding a product M/A-COM Technology Solutions is considering for development. Performance is based on target specifications, simulated results, and/or prototype measurements. Commitment to develop is not guaranteed.

PRELIMINARY: Data Sheets contain information regarding a product M/A-COM Technology Solutions has under development. Performance is based on engineering tests. Specifications are typical. Mechanical outline has been fixed. Engineering samples and/or test data may be available. Commitment to produce in volume is not guaranteed.

# SP4T High Isolation Terminated Switch 0.01 - 4.0 GHz

Rev. V1

## Absolute Maximum Ratings 6,7

Parameter	Absolute Maximum			
Max Input Power (RFC Port , ON state)	+20 dBm (0.05 - 0.5 GHz) +30 dBm (0.5 - 4.0 GHz)			
V <sub>DD</sub> Supply	-0.5 V to +7.0 V			
Control Voltage	$-0.5 \text{ V} < \text{V}_{\text{C}} < \text{V}_{\text{DD}} + 0.5 \text{ V}$ (V <sub>C</sub> not to exceed 7.0 V)			
Operating Temperature	-40°C to +85°C			
Storage Temperature	-65°C to +150°C			

- Exceeding any one or combination of these limits may cause permanent damage to this device.
- M/A-COM Technology Solutions does not recommend sustained operation near these survivability limits.

# Application Schematic<sup>8,9,10</sup>

- The exposed pad centered on the package bottom must be connected to ground for RF, DC and thermal considerations.
- All blocking capacitors and decoupling capacitors = 1000 pF
   M/A-COM Technology Solutions recommends connecting all N/C pins to RF and DC ground in the PCB layout as shown.

## Truth Table 11,12

V1	V2	V3	RFC- RF1	RFC- RF2	RFC- RF3	RFC- RF4
0	0	0	Unsupported			
1	0	0	On	Off	Off	Off
0	1	0	Off	On	Off	Off
1	1	0	Off	Off	On	Off
0	0	1	Off	Off	Off	On
0	1	1	Off	Off	Off	Off
1	1	1	Off	Off	Off	Off

- 11. Positive Control: 1 =  $0.7^*V_{DD}$  to  $V_{DD}$ 0 = 0 V to  $0.3^*V_{DD}$
- See Application Section for optional 2 control operation for applications which do not require the All-Off condition.

## **Handling Procedures**

Please observe the following precautions to avoid damage:

### Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices. An external protection circuit using ESD/Transient protection devices on the RF ports can be used to protect the IC if required in application.

Please reference application note AN3007 on http://www.macomtech.com for further detail.
