MC100EPT23

3.3V Dual Differential LVPECL/LVDS/CML to LVTTL/LVCMOS Translator

The MC100EPT23 is a dual differential LVPECL/LVDS/CML to LVTTL/LVCMOS translator. Because LVPECL (Positive ECL), LVDS, and positive CML input levels and LVTTL/LVCMOS output levels are used, only +3.3 V and ground are required. The small outline 8-lead SOIC package and the dual gate design of the EPT23 makes it ideal for applications which require the translation of a clock or data signal.

The EPT23 is available in only the ECL 100K standard. Since there are no LVPECL outputs or an external V_{BB} reference, the EPT23 does not require both ECL standard versions. The LVPECL/LVDS inputs are differential. Therefore, the MC100EPT23 can accept any standard differential LVPECL/LVDS input referenced from a V_{CC} of +3.3 V.
