MC100EPT25

-3.3V / -5V Differential ECL to +3.3V LVTTL Translator

ON Semiconductor®

http://onsemi.com

Description

The MC100EPT25 is a Differential ECL to LVTTL translator. This device requires +3.3 V, −3.3 V to −5.2 V, and ground. The small outline 8−lead package and the single gate of the EPT25 make it ideal for applications which require the translation of a clock or data signal.

The V_{BB} output allows the EPT25 to also be used in a single−ended input mode. In this mode the V_{BB} output is tied to the D input for a inverting buffer or the $\overline{D}$ input for a non−inverting buffer. If used, the V_{BB} pin should be bypassed to ground with at least a 0.01 μF capacitor.
