OMNIFET III
fully protected low-side driver

Features

Type	V _{clamp}	R _{DS(on)}	I _D
VNL5160N3-E	41 V	160 mΩ	3.5 A
VNL5160S5-E			

- Drain current:3.5A
- ESD protection
- Overvoltage clamp
- Thermal shutdown
- Current and power limitation
- Very low standby current
- Very low electromagnetic susceptibility
- In compliance with the 2002/95/EC European directive
- Open drain status output^(a)

Description

The VNL5160N3-E and VNL5160S5-E are monolithic devices, made using STMicroelectronics VIPower™ Technology, intended for driving resistive or inductive loads with one side connected to the battery. Built-in thermal shutdown protects the chip from overtemperature and short circuit. Output current limitation protects the devices in an overload condition. In the case of a long duration overload, the device limits the dissipated power to a safe level up to thermal shutdown intervention. Thermal shutdown, with automatic restart, allows the device to recover normal operation as soon as a fault condition disappears. Fast demagnetization of inductive loads is achieved at turn-off.

a. Valid for VNL5160S5-E only.

2 Absolute maximum rating

Stressing the device above the rating listed in the “Absolute maximum ratings” table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality document

4.1 MCU I/O protection

ST suggests to insert a resistor (R_{prot}) in line to prevent the μC I/O pins from latching up^(b). The value of these resistors is a compromise between the leakage current of μC and the current required by the LSD I/Os (Input levels compatibility) with the latch-up limit of μC I/Os:

$$0.7/I_{latchup} \leq R_{prot} \leq (V_{OH\mu C} - V_{IH}) / I_{IHmax}$$

Calculation example:

For the following conditions:

$$I_{latchup} \geq 20mA$$

$$V_{OH\mu C} \geq 4.5V$$

$$35\Omega \leq R_{prot} \leq 100k\Omega$$

Recommended value is $R_{prot} = 10k\Omega$
