

## Quad channel high-side driver

### Features

Type	$R_{DS(on)}$	$I_{OUT}$	$V_{CC}$
VNQ830	65 m $\Omega$ <sup>(1)</sup>	6A	36V

1. Per each channel.

- CMOS compatible inputs
- Open Drain status outputs
- On-state open-load detection
- Off-state open-load detection
- Shorted load protection
- Undervoltage and overvoltage shutdown
- Loss of ground protection
- Very low standby current
- Reverse battery protection

### Description

The VNQ830 is a quad HSD formed by assembling two VND830 chips in the same SO-28 package. The VND830 is a monolithic device made using STMicroelectronics™ VIPower™ M0-3 Technology. The device is intended for driving any type of multiple load with one side connected to ground.

The active  $V_{CC}$  pin voltage clamp protects the device against low energy spikes (see ISO7637 transient compatibility table). Active current limitation combined with thermal shutdown and automatic restart protects the device against overload. The device detects the open load condition in both the on and off state.

In the off state the device detects if the output is shorted to  $V_{CC}$ . The device automatically turns off in the case where the ground pin becomes disconnected.

## 2 Electrical specifications

### 2.1 Absolute maximum ratings

Stressing the device above the rating listed in the “Absolute maximum ratings” table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality document.

**Table 3. Absolute maximum ratings**

Symbol	Parameter	Value	Unit
$V_{CC}$	DC supply voltage	41	V
$-V_{CC}$	Reverse DC supply voltage	-0.3	V
$-I_{GND}$	DC reverse ground pin current	-200	mA
$I_{OUT}$	DC output current	Internally limited	A
$-I_{OUT}$	Reverse DC output current	-6	A
$I_{IN}$	DC input current	+/- 10	mA
$I_{STAT}$	DC Status current	+/- 10	mA
$V_{ESD}$	Electrostatic discharge (human body model: R=1.5K $\Omega$ ; C = 100pF)		
	– INPUT	4000	V
	– STATUS	4000	V
	– OUTPUT	5000	V
	– $V_{CC}$	5000	V
$E_{MAX}$	Maximum switching energy (L = 2.5 mH; $R_L = 0 \Omega$ ; $V_{bat} = 13.5 V$ ; $T_{jstart} = 150 \text{ }^\circ\text{C}$ ; $I_L = 9 A$ )	140	mJ
$P_{tot}$	Power dissipation (per island) at $T_{lead} = 25 \text{ }^\circ\text{C}$	6.25	W
$T_j$	Junction operating temperature	Internally limited	$^\circ\text{C}$
$T_{stg}$	Storage temperature	-55 to 150	$^\circ\text{C}$

## 2.2 Thermal data

**Table 4. Thermal data (per island)**

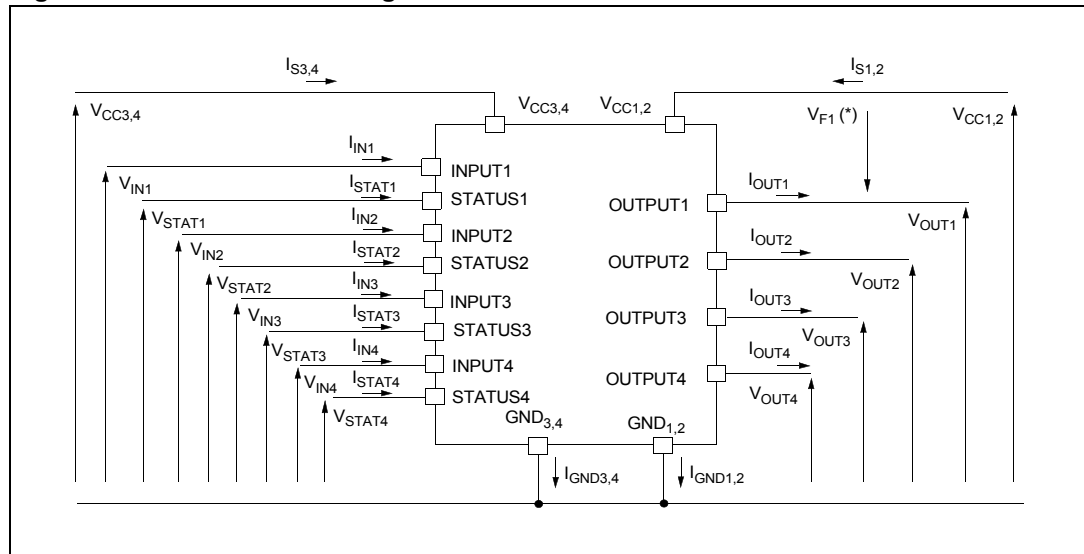

Symbol	Parameter	Value		Unit
$R_{thj-lead}$	Thermal resistance junction-lead	20		°C/W
$R_{thj-amb}$	Thermal resistance junction-ambient (one chip ON)	60 <sup>(1)</sup>	44 <sup>(2)</sup>	°C/W
$R_{thj-amb}$	Thermal resistance junction-ambient (two chips ON)	46 <sup>(1)</sup>	31 <sup>(2)</sup>	°C/W

1. When mounted on a standard single-sided FR-4 board with 0.5cm<sup>2</sup> of Cu (at least 35 μm thick) connected to all V<sub>CC</sub> pins. Horizontal mounting and no artificial air flow.
2. When mounted on a standard single-sided FR-4 board with 6cm<sup>2</sup> of Cu (at least 35 μm thick) connected to all V<sub>CC</sub> pins. Horizontal mounting and no artificial air flow.

## 2.3 Electrical characteristics

Values specified in this section are for 8V < V<sub>CC</sub> < 36V; -40 °C < T<sub>j</sub> < 150 °C, unless otherwise stated.

**Figure 3. Current and voltage conventions**

Note:  $V_{Fn} = V_{CCn} - V_{OUTn}$  during reverse battery condition.

**Table 5. Power**

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
$V_{CC}$	Operating supply voltage		5.5	13	36	V

$I_{L(off3)}$	Off-state output current	$V_{IN} = V_{OUT} = 0\text{ V}; V_{CC} = 13\text{ V}; T_j = 125\text{ °C}$			5	$\mu\text{A}$
$I_{L(off4)}$	Off-state output current	$V_{IN} = V_{OUT} = 0\text{ V}; V_{CC} = 13\text{ V}; T_j = 25\text{ °C}$			3	$\mu\text{A}$

**Table 6. Protections**

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
$T_{TSD}$	Shutdown temperature		150	175	200	$^{\circ}\text{C}$
$T_R$	Reset temperature		135			$^{\circ}\text{C}$
$T_{hyst}$	Thermal hysteresis		7	15		$^{\circ}\text{C}$
$t_{SDL}$	Status delay in overload conditions	$T_j > T_{TSD}$			20	$\mu\text{s}$
$I_{lim}$	Current limitation	$V_{CC} = 13\text{ V}$	6	9	15	A
		$5.5\text{ V} < V_{CC} < 36\text{ V}$			15	A
$V_{demag}$	Turn-off output clamp voltage	$I_{OUT} = 2\text{ A}; L = 6\text{ mH}$	$V_{CC} - 41$	$V_{CC} - 48$	$V_{CC} - 55$	V

**Note:** To ensure long term reliability under heavy overload or short circuit conditions, protection and related diagnostic signals must be used together with a proper software strategy. If the device is subjected to abnormal conditions, this software must limit the duration and number of activation cycles.

### 3 Application information

Figure 24. Application schematic

Note: Channels 3 and 4 have the same internal circuit as channel 1 and 2.

#### 3.1 GND protection network against reverse battery

This section provides two solutions for implementing a ground protection network against reverse battery.

##### 3.1.1 Solution 1: a resistor in the ground line (R<sub>GND</sub> only)

This can be used with any type of load.

The following show how to dimension the R<sub>GND</sub> resistor:

1.  $R_{GND} \leq 600 \text{ mV} / 2(I_{S(on)max})$
2.  $R_{GND} \geq (-V_{CC}) / (-I_{GND})$

where  $-I_{GND}$  is the DC reverse ground pin current and can be found in the absolute maximum rating section of the device datasheet.

Power dissipation in  $R_{GND}$  (when  $V_{CC} < 0$  during reverse battery situations) is:

$$P_D = (-V_{CC})^2 / R_{GND}$$

This resistor can be shared amongst several different HSDs. Please note that the value of this resistor should be calculated with formula (1) where  $I_{S(on)max}$  becomes the sum of the maximum on-state currents of the different devices.

Please note that, if the microprocessor ground is not shared by the device ground, then the  $R_{GND}$  will produce a shift ( $I_{S(on)max} * R_{GND}$ ) in the input thresholds and the status output values. This shift will vary depending on how many devices are ON in the case of several high side drivers sharing the same  $R_{GND}$ .

If the calculated power dissipation requires the use of a large resistor, or several devices have to share the same resistor, then ST suggests using solution 2 below.

### 3.1.2 Solution 2: a diode ( $D_{GND}$ ) in the ground line

A resistor ( $R_{GND} = 1 \text{ k}\Omega$ ) should be inserted in parallel to  $D_{GND}$  if the device will be driving an inductive load. This small signal diode can be safely shared amongst several different HSD. Also in this case, the presence of the ground network will produce a shift ( $\approx 600 \text{ mV}$ ) in the input threshold and the status output values if the microprocessor ground is not common with the device ground. This shift will not vary if more than one HSD shares the same diode/resistor network. Series resistor in INPUT and STATUS lines are also required to prevent that, during battery voltage transient, the current exceeds the Absolute Maximum Rating. Safest configuration for unused INPUT and STATUS pin is to leave them unconnected.

## 3.2 Load dump protection

$D_{ld}$  is necessary (voltage transient suppressor) if the load dump peak voltage exceeds the  $V_{CC}$  maximum DC rating. The same applies if the device is subject to transients on the  $V_{CC}$  line that are greater than those shown in the ISO T/R 7637/1 table.

## 3.3 MCU I/O protection

If a ground protection network is used and negative transients are present on the  $V_{CC}$  line, the control pins will be pulled negative. ST suggests to insert a resistor ( $R_{prot}$ ) in line to prevent the microcontroller I/O pins from latching up.

The value of these resistors is a compromise between the leakage current of microcontroller and the current required by the HSD I/Os (Input levels compatibility) with the latch-up limit microcontroller I/Os:

$$-V_{CCpeak} / I_{latchup} \leq R_{prot} \leq (V_{OH\mu C} - V_{IH} - V_{GND}) / I_{IHmax}$$

**Example**

For the following conditions:

$$V_{CCpeak} = -100 \text{ V}$$

$$I_{latchup} \geq 20 \text{ mA}$$

$$V_{OH\mu C} \geq 4.5 \text{ V}$$

$$5 \text{ k}\Omega \leq R_{prot} \leq 65 \text{ k}\Omega$$

Recommended values are:

$$R_{prot} = 10 \text{ k}\Omega$$

**3.4 Open load detection in off-state**

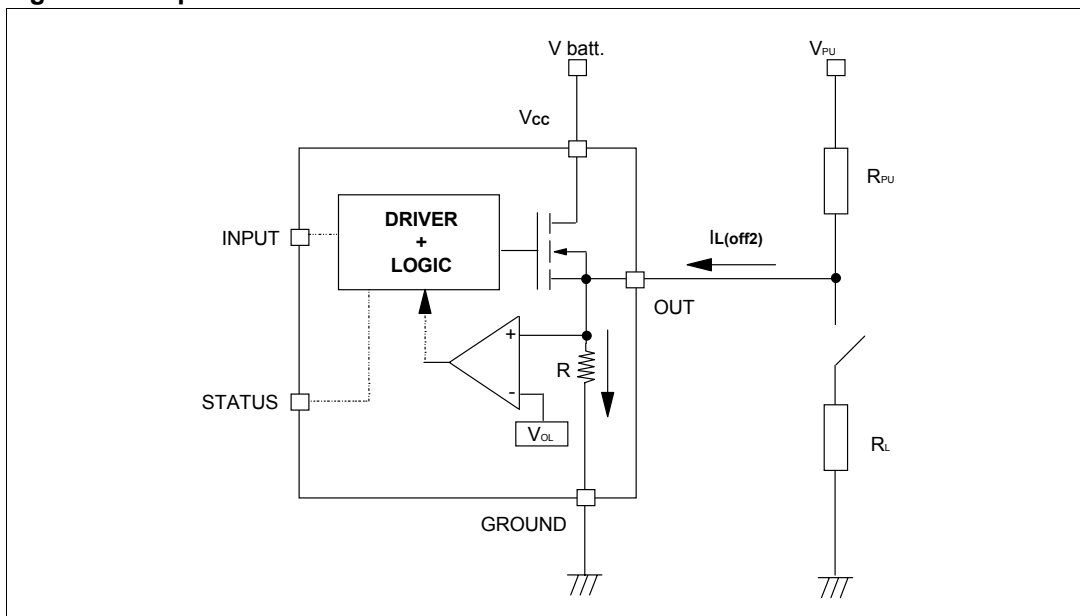

Off-state open load detection requires an external pull-up resistor ( $R_{PU}$ ) connected between OUTPUT pin and a positive supply voltage ( $V_{PU}$ ) like the +5V line used to supply the microprocessor.

The external resistor has to be selected according to the following requirements:

1. No false open load indication when load is connected: in this case we have to avoid  $V_{OUT}$  to be higher than  $V_{OLmin}$ ; this results in the following condition  $V_{OUT} = (V_{PU} / (R_L + R_{PU}))R_L < V_{OLmin}$ .
2. No misdetection when load is disconnected: in this case the  $V_{OUT}$  has to be higher than  $V_{OLmax}$ ; this results in the following condition  $R_{PU} < (V_{PU} - V_{OLmax}) / I_{L(off2)}$ .

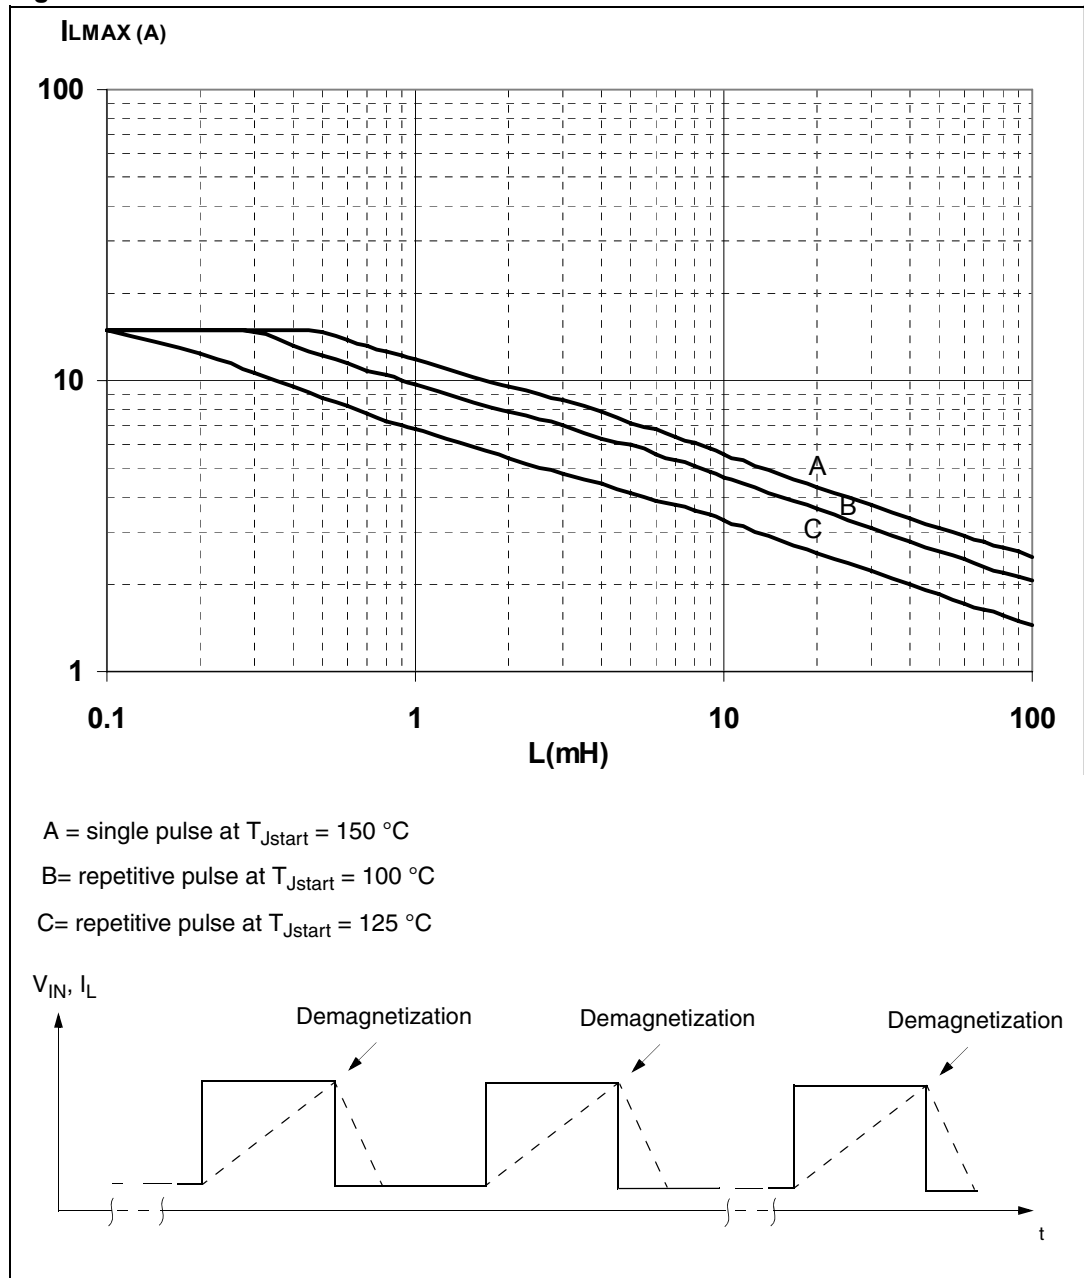

Because  $I_{s(OFF)}$  may significantly increase if  $V_{out}$  is pulled high (up to several mA), the pull-up resistor  $R_{PU}$  should be connected to a supply that is switched OFF when the module is in standby.

**Figure 25. Open-load detection in off-state**

### 3.5 Maximum demagnetization energy ( $V_{CC} = 13.5V$ )

Figure 26. Maximum turn-off current versus load inductance

Note: Values are generated with  $R_L = 0 \Omega$ .  
 In case of repetitive pulses,  $T_{Jstart}$  (at beginning of each demagnetization) of every pulse must not exceed the temperature specified above for curves B and C.

## 4 Package and PCB thermal data

### 4.1 SO-28 thermal data

Figure 27. SO-28 PC board

Note: Layout condition of  $R_{th}$  and  $Z_{th}$  measurements (PCB FR4 area = 58mm x 58mm, PCB thickness = 2mm, Cu thickness = 35 $\mu$ m, Copper areas: 0.5 cm<sup>2</sup>, 3 cm<sup>2</sup>, 6 cm<sup>2</sup>).

Table 16. Thermal calculation according to the PCB heatsink area

Chip 1	Chip 2	$T_{jchip1}$	$T_{jchip2}$	Note
ON	OFF	$R_{thA} \times P_{dchip1} + T_{amb}$	$R_{thC} \times P_{dchip1} + T_{amb}$

## 5 Package and packing information

### 5.1 ECOPACK<sup>®</sup> packages

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK<sup>®</sup> packages, depending on their level of environmental compliance. ECOPACK<sup>®</sup> specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com).

ECOPACK<sup>®</sup> is an ST trademark.

Figure 31. SO-28 package dimensions

Table 18. SO-28 mechanical data

Symbol	Millimeters		
	Min.	Typ.	Max.
A			2.65
a1	0.10		0.30
b	0.35		0.49
b1	0.23		0.32
C		0.50	
c1	45° (typ.)		
D	17.7		18.1
E	10.00		10.65
e		1.27	
e3		16.51	
F	7.40		7.60
L	0.40		1.27
S	8° (max.)

## 6 Revision history

**Table 19. Document revision history**

Date	Revision	Changes
21-Jun-2004	1	Initial release.
03-May-2006	2	<p>E<sub>max</sub> value (page 1).</p> <p>Current and voltage convention update (page 3).</p> <p>Configuration diagram (top view) &amp; suggested connections for unused and n.c. pins insertion (page 3).</p> <p>6 cm<sup>2</sup> Cu condition insertion in Thermal Data table (page 4).</p> <p>V<sub>CC</sub> - output diode section update (page 5).</p> <p>Protections note insertion (page 5).</p> <p>On-state resistance Vs V<sub>CC</sub> curve conditions correction (page 13).</p> <p>Turn-off voltage slope curve conditions correction (page 14).</p> <p>"Maximum turn-off current versus load inductance" curve modification (page 15).</p> <p>"SO-28 thermal impedance junction ambient single pulse": curve modification (page 17).</p> <p>Revision history table insertion (page 20).</p> <p>Disclaimers update (page 21).</p>
25-Nov-2008	3	<p>Document reformatted and restructured.</p> <p>Added contents, list of tables and figures.</p> <p>Added <i>ECOPACK<sup>®</sup> packages</i> information.</p>
07-Feb-2011	4	Updated <i>Figure 5: Switching characteristics</i>

**Please Read Carefully:**

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

**UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.**

**UNLESS EXPRESSLY APPROVED IN WRITING BY AN AUTHORIZED ST REPRESENTATIVE, ST PRODUCTS ARE NOT RECOMMENDED, AUTHORIZED OR WARRANTED FOR USE IN MILITARY, AIR CRAFT, SPACE, LIFE SAVING, OR LIFE SUSTAINING APPLICATIONS, NOR IN PRODUCTS OR SYSTEMS WHERE FAILURE OR MALFUNCTION MAY RESULT IN PERSONAL INJURY, DEATH, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE. ST PRODUCTS WHICH ARE NOT SPECIFIED AS "AUTOMOTIVE GRADE" MAY ONLY BE USED IN AUTOMOTIVE APPLICATIONS AT USER'S OWN RISK.**

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.
