

Applications

- 3G / 4G Wireless Infrastructure
- CDMA, TD-CDMA, WCDMA, LTE
- Repeaters
- PTP Radio IF Chains

Product Features

- 1.4-2.7 GHz Frequency Range
- 31.7 dB Maximum Gain at 2 GHz
- 31.5 dB Gain Range in 0.5 dB Steps
- +43 dBm Output IP3
- +24.5 dBm Output P1dB
- 1.5 dB Noise Figure at Max. Gain State
- Fully Internally Matched Module
- Integrated Blocking Capacitors, Bias Inductors
- 3-wire SPI Control Programming

General Description

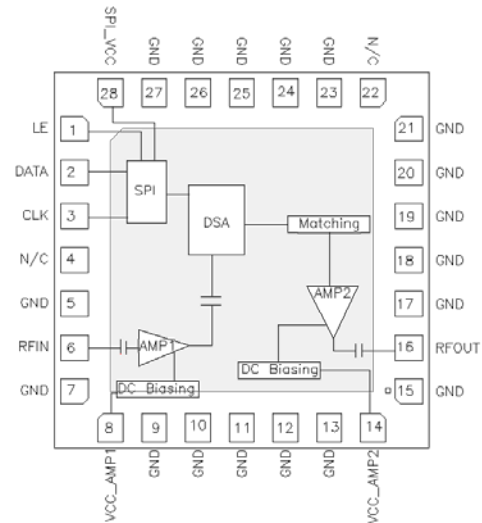

The TQM879006A is a digital variable gain amplifier (DVGA) featuring high linearity over the entire gain control range. The amplifier module features the integration of a low noise amplifier gain block, a digital-step attenuator (DSA), along with a high linearity $\frac{1}{4}$ W amplifier. The module has the added features of integrating all matching components with bias chokes and blocking capacitors. The internal DSA offers 0.5 dB step, 6-bit, and 31.5 dB range and is controlled with a serial periphery interface (SPITM).

The TQM879006A features variable gain from 0 dB to 31.7 dB at 2 GHz, has +43 dBm Output IP3, and +24.5 dBm P1dB. The amplifier also has a very low 1.5 dB Noise Figure (at maximum gain) allowing it to be an ideal DVGA for both receiver and transmitter applications. The amplifier operates from a single +5V supply and is available in a compact 28-pin 6x6 mm leadless SMT package.

28-pin 6x6mm leadless SMT package

All Other Pins	GND

Ordering Information

Part No.	Description
TQM879006A	1.4-2.7GHz Digital Variable Gain Amp
TQM879006A-PCB	Fully Assembled Evaluation Board Includes USB control board (EVH)

Standard T/R size = 2500 pieces on a 13" reel.

Specifications

Absolute Maximum Ratings

Parameter	Rating
Storage Temperature	-55 to 150 °C
RF Input Power, CW, 50Ω, T = 25°C	+23 dBm
V _{cc} (pins 8, 14, 28)	+5.5 V
Digital Input Voltage	V _{cc} + 0.5V

Operation of this device outside the parameter ranges given above may cause permanent damage.

Recommended Operating Conditions

Parameter	Min	Typ	Max	Units
V _{cc} (pins 8, 14, 28)	4.75	5	5.25	V
Case Temperature	-40		85	°C
Junction Temperature, T _j			170	°C

T_j specified for >10⁶ hours MTTF

Electrical specifications are measured at specified test conditions. Specifications are not guaranteed over all recommended operating conditions.

Electrical Specifications

Test conditions unless otherwise noted: 25°C, V_{cc} = +5V, Maximum Gain State.

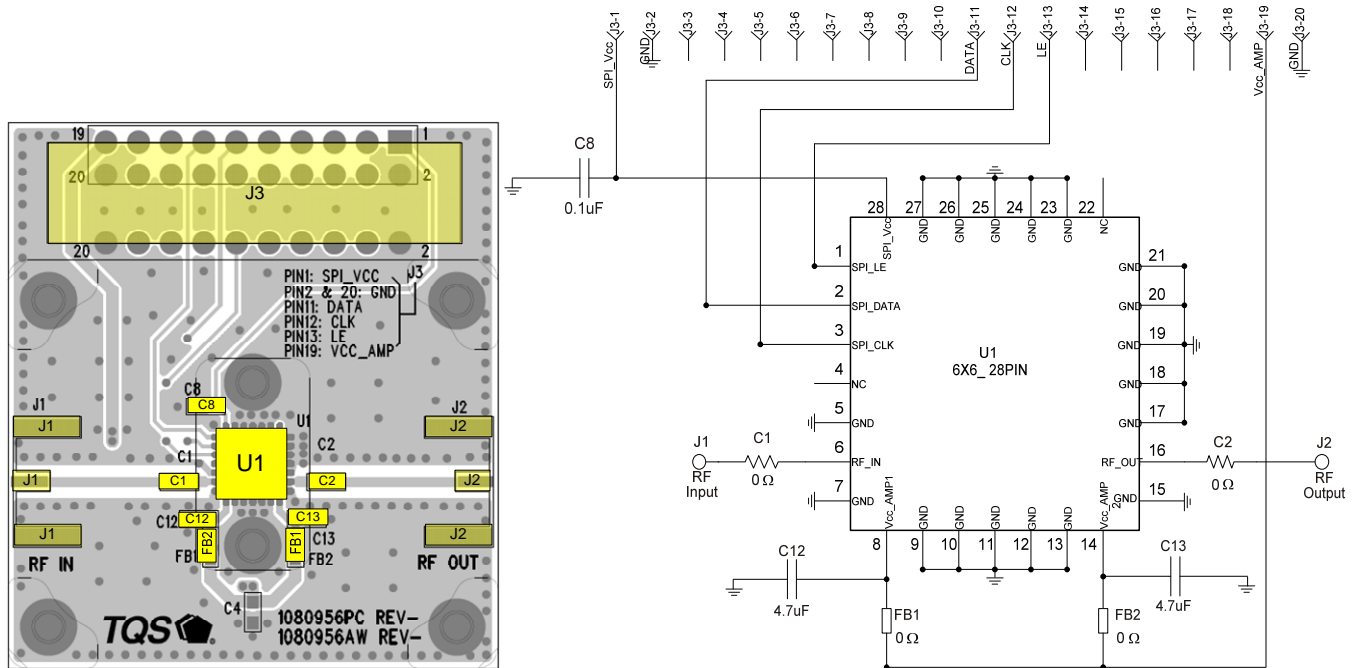

Parameter	Conditions	Min	Typ	Max	Units
Operational Freq Range		1400		2700	MHz
Test Frequency			2000		MHz
Gain		27.5	31.7		dB
Gain Control Range	0.5 dB Step Size		31.5		dB
Accuracy Error	All States, 3 wire SPI, 6 states	±(0.3+5% of Attenuation setting) Max			dB
Control Interface	3-wire serial interface		6		Bit
Input Return Loss			21		dB
Output Return Loss			20		dB
Output P1dB			+24.5		dBm
Output IP3	P _{out} = +11 dBm/tone, Δf = 1MHz Spacing	+38	+43.0		dBm
Noise Figure			1.5		dB

TQM879006A

1.4-2.7GHz 1/4 W Digital Variable Gain Amplifier

Application Circuit (TQM879006A-PCB)

Notes:

1. For PCB Board Layout, see page 9 for more information.
2. All Components are of 0603 size unless stated otherwise.
3. For SPI Timing Diagram, see page 6.
4. 0 Ω jumpers may be replaced with copper traces in the target application layout.
5. Different ground pins are used for SPI (digital) and analog supply voltages.
6. The primary RF microstrip characteristic line impedance is 50 Ω.
7. The single power supply is used to provide supply voltage to AMP1 and AMP2.

Bill of Material: TQM879006A-PCB

Detailed Device Description

The TQM879006A is a 50 Ω internally matched digital variable gain amplifier (DVGA) featuring high linearity over the entire gain control range. The amplifier module features the integration of a low noise amplifier gain block, a digital-step attenuator (DSA), along with a high linearity $\frac{1}{4}W$ amplifier as shown in the functional diagram below. The module is unconditionally stable. Internal blocking capacitors and bias structures keep external parts count to a minimum. The DVGA has an operational frequency range from 1.4 - 2.7 GHz.

For any further technical questions, please email to sicapplications.engineering@tqs.com.

Functional Schematic Diagram

Where M = Matching Network.

Chain Analysis Table

The chain analysis of DVGA module is shown below in the table. This table provides the typical performance of individual stages in the module as well as overall module performance.

Function	Individual Stage Performance			Overall Performance
	AMP1	DSA	AMP2	
Gain (dB)	19	-1.8	14.5	31.7
NF (dB)	1.3	1.8	4.0	1.5
OIP3 (dBm)	36	55	43	43
P1dB (dBm)	20	28.5	24.5	24.5
I _{cc} (mA)	85	2.0	87	174

Detailed Device Description

AMP1

AMP1 is a wide band low noise amplifier gain block in DVGA module. The amplifier provides 19 dB gain, 1.3 dB noise figure, +36 dBm OIP3 at 2.0 GHz while only drawing 85 mA current. External DC blocks and biasing is not required. AMP1 is DC blocked internally and is connected internally to three bypass capacitors (22 pF, 100 pF, 0.01 uF) followed by 22 nH inductor inside the module as shown in the figure below.

DSA (Digital Step Attenuator)

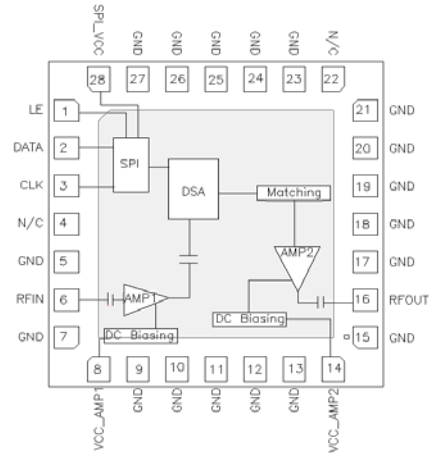

DVGA has a serial digital step attenuator that is controlled with 6-bit serial periphery interface (SPI™) and has 0.5 dB step size with 31.5 dB attenuation range. This 50-ohm RF DSA maintains high attenuation accuracy over frequency and temperature. "000000" represents maximum attenuation state. External bypass capacitors are needed to compensate the inductance effect associated with long transmission lines on the evaluation board.

AMP2

AMP2 is high linearity ¼-W amplifier in DVGA module. The amplifier provides 14.4 dB gain, +24.5 dBm P1dB, +43 dBm OIP3 at 2.0 GHz while only drawing 87 mA current. The amplifier is optimized over 1.4 – 2.7 GHz bandwidth using internal matching components. AMP2 is DC blocked internally and is connected internally to two bypass capacitors (22 pF, 0.01 uF) followed by an 18 nH inductor inside the module as shown in the figure below. External DC blocks and biasing is not required.

Pin Configuration and Description

Pin	Symbol	Description
1	LE	Serial Latch Enable Input. When LE is high, latch is clear and content of SPI control the attenuator. When LE is low, data in SPI is latched.
2	DATA	Serial data input. The data and clock pins allow the data to be entered serially into SPI and is independent of Latch state.
3	CLK	Serial clock input.
4, 22	N/C	No connect or open. This pin is not connected in this module
6	RFIN	Input, matched to 50 ohms between 1800 and 2700 MHz. Internally DC blocked.
8	VCC_AMP1	Supply Voltage to AMP1. This pin is connected internally to 3 bypass capacitors (22pF, 100 pF, 0.01uF) followed by a 22 nH inductor inside the module.
14	VCC_AMP2	Supply Voltage to AMP2. This pin is connected internally to 2 bypass capacitors (22pF, 0.01uF) followed by an 18 nH inductor inside the module.
16	RFOUT	Output, matched to 50 ohms between 1800 and 2700 MHz. Internally DC blocked.
28	VCC_SPI	Supply voltage for SPI and DSA chip. This pin is connected to 0.1uF bypass capacitor internally.
All other Pins	GND	RF/DC Ground Connection

Applications Information

PC Board Layout

Top RF layer is .014" NELCO N4000-13 material, ϵ_r (typical) = 3.7, 4 total layers (0.062" thick) for mechanical rigidity. Metal layers are 1-oz copper. Microstrip line details: width = .030", spacing = .036".

The pad pattern shown has been developed and tested for optimized assembly at TriQuint Semiconductor. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from supplier to supplier, careful process development is recommended.

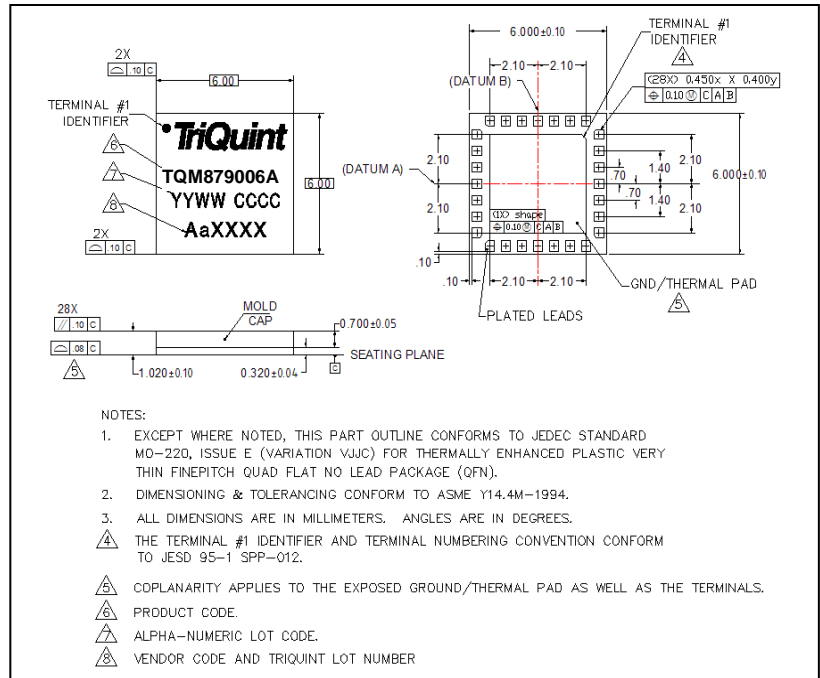

For further technical information, Refer to www.TriQuint.com

Mechanical Information

Package Information and Dimensions

This package is RoHS-compliant. The package bottom finish is electrolytic plated Au over Ni. It is compatible with both lead-free (maximum 260 °C reflow temperature) and lead (maximum 245 °C reflow temperature) soldering processes. Also recommend adding active fluxes of 2% during solder reflow.

The component will be laser marked with “TQM879006A” product label with an alphanumeric lot code on the top surface of the package.

PCB Mounting Pattern

Notes:

- All dimensions are in millimeters. Angles are in degrees.
- Use 1 oz. copper minimum for top and bottom layer metal.
- Vias are required under the backside paddle of this device for proper RF/DC grounding and thermal dissipation. We recommend a 0.35mm (#80/.0135") diameter bit for drilling via holes and a final plated thru diameter of 0.25mm (0.10").
- Ensure good package backside paddle solder attach for reliable operation and best electrical performance.

Product Compliance Information

ESD Information

Caution! ESD-Sensitive Device

ESD Rating: Class 1A
Value: Passes $\geq 250V$ to $< 500 V$
Test: Human Body Model (HBM)
Standard: JEDEC Standard JESD22-A114

ESD Rating: Class IV
Value: Passes $\geq 1000 V$
Test: Charged Device Model (CDM)
Standard: JEDEC Standard JESD22-C101

MSL Rating

The part is rated Moisture Sensitivity Level 3 at 260°C per JEDEC standard IPC/JEDEC J-STD-020.

Solderability

Compatible with both lead-free (maximum 260 °C reflow temperature) and tin/lead (maximum 245 °C reflow temperature) soldering processes.

This part is compliant with EU 2002/95/EC RoHS directive (Restrictions on the Use of Certain Hazardous Substances in Electrical and Electronic Equipment).

This product also has the following attributes:

- Halogen Free (Chlorine, Bromine)
- Antimony Free
- TBBP-A ($C_{15}H_{12}Br_4O_2$) Free
- PFOS Free
- SVHC Free
