

OptiMOS™ 75V

Optimized for Synchronous Rectification

Infineon's OptiMOS™ 75V power MOSFET family is optimized for Synchronous Rectification in AC/DC Switched-Mode Power Supplies (SMPS), such as those used in desktop computers and servers. OptiMOS™ 75V devices features industry leading on-state resistance ($R_{DS(on)}$) and Figure of Merit (FOM) characteristics, reducing power losses and improving overall efficiency under all load conditions in SMPS DC/DC converters, Solar Micro Inverters as well as Motor Control and fast switching Class D Audio Amplifiers.

Infineon's OptiMOS™ 75V delivers outstanding performance, thus enabling power supply manufacturers to meet energy efficiency targets such as 80PLUS® Platinum and Titanium requirements initiated by the Climate Savers Computing Initiative.

Features

- Optimized technology for Synchronous Rectification
- Industry's lowest $R_{DS(on)}$
- World's lowest FOM
- Very low Q_g and Q_{gd}
- RoHS compliant - halogen free

Benefits

- Highest system efficiency
- Less paralleling required
- Increased power density
- System cost reduction
- Very low voltage overshoot

Application

- Synchronous Rectification in server and desktop
- Isolated DC/DC converters
- Motor Control for 12-48V systems
- Solar micro inverter
- OR-ing switches
- Circuit breakers
- Class D Audio Amplifiers

OptiMOS™ 75V fulfills 80PLUS® platinum on a 750W server power supply

OptiMOS™ 75V

Optimized for Synchronous Rectification

The Infineon OptiMOS™ 75V family offers products in SuperS08, a space saving package, which provides optimized switching behavior and high efficiency levels. $R_{DS(on)}$ values which could previously only be achieved in larger packages such as the TO-220, can now be reached with the slim SuperS08 (5x6x1mm³), that provides ideal switching behavior and high efficiency levels.

SuperS08 versus TO-220 voltage overshoot comparison

SuperS08 enables a board space reduction of 96% compared to TO-220 enabling to more compact designs. Increased power density, high efficiency and low voltage overshoot can be achieved on a system level due to minimized package parasitics.

OptiMOS™ 75V Product Portfolio

CanPAK™ S	I ² PAK	D ² PAK	TO-220	SuperS08	Bare Die ($R_{DS(on)}$ typ.)
BSF450NE7NH3 G $R_{DS(on)} = 45\text{m}\Omega$	IPI023NE7N3 G $R_{DS(on)} = 2.3\text{m}\Omega$	IPB020NE7N3 G $R_{DS(on)} = 2.0\text{m}\Omega$	IPP023NE7N3 G $R_{DS(on)} = 2.3\text{m}\Omega$	BSC036NE7NS3 G $R_{DS(on)} = 3.6\text{m}\Omega$	IPC302NE7N3 $2\text{m}\Omega < R_{DS(on)} < 4\text{m}\Omega$
	IPI034NE7N3 G $R_{DS(on)} = 3.4\text{m}\Omega$	IPB031NE7N3 G $R_{DS(on)} = 3.1\text{m}\Omega$	IPP034NE7N3 G $R_{DS(on)} = 3.4\text{m}\Omega$	BSC042NE7NS3 G $R_{DS(on)} = 4.2\text{m}\Omega$	
	IPI052NE7N3 G $R_{DS(on)} = 5.2\text{m}\Omega$	IPB049NE7N3 G $R_{DS(on)} = 4.9\text{m}\Omega$	IPP052NE7N3 G $R_{DS(on)} = 5.2\text{m}\Omega$		
			IPP062NE7N3 G $R_{DS(on)} = 6.2\text{m}\Omega$

Warnings

Due to technical requirements components may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies Office. Infineon Technologies Components may only be used in life-support devices or systems with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life-support device or system, or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body, or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.
